

## Abstract

Container or box for packaging and unwinding a coil (18) of wire (2), which comprises: a box-like body (5, 11) that has a polygonal plan, can be opened at the top and is meant to accommodate a coil for wire; and a coil covering panel (16) that has a central circular opening (17) and a contour that matches the plan shape of the box-like body, so that it can freely descend within the box-like body in contact with the coil as the height of the coil decreases as the wire is unwound from above through the central opening of the panel, in order to prevent the lifting of turns of wire between the peripheral region of the panel and the container and thus the accidental entanglement of turns.
